

## HYDRAULIC HOSE REPAIR CLAMP KIT

**Our hydraulic hose repair collar is designed to reduce downtime from hours or even days to just minutes. The 316 stainless steel collar is reusable and should be used as a temporary measure while waiting for a new hose. Its simple and fast use. For small holes, simply place the pliers over the hole or for a sturdier repair, cut the hose, insert the barb and secure the pliers. It's a one-time investment that will save you time and money for years to come.**

**Our hydraulic hose repair clamp kit is ideal for farmers and contractors using a variety of hoses of different sizes. Use it as a patch for a quick repair to get back to the shop or move the machines to a more convenient location or to keep working until you can replace your hose. Kit includes repair clamps, junction barbs, and bolts for 1/4", 3/8", 1/2", 3/4" and 1" hoses**.
